NEW [Filter functionality added to the Accessories screen](#) [LSM-3762]

Access & Accounts

NEW [Timeline added to the Account details screen](#) [LSM-3969]

Policies

IMPROVED [Added colored checkboxes in the policy editor's "Add item" dialog](#) [LSM-2655]

IMPROVED [Increased performance of policy editor](#) [LSM-4017]

Quotations & Persons & Relations

FIX [Linking from the Quotation screen to the Vehicle Details screen now shows the configured vehicle](#) [LSM-3987]

Vehicle

FIX [Vehicle equipment history didn't always show](#) [LSM-4049]

FIX [Linking from the Search Screen to a Calculation Table now correctly filters the Calculation Table](#) [LSM-4069]

FIX [Fixed generic error page upon validation error on calculation table screen](#) [LSM-4172]

Reports

FIX [Checkmarks on the report overview page are now centered](#) [LSM-4134]

Resources

FIX [Creating a resource for a vehicle now also works with numeric equipment](#) [LSM-3978]

Layouts

FIX [Fixed "Calculation parameter is not allowed" when saving a search layout](#) [LSM-4169]

Navigation & Context

FIX [Layout menu default indicator now visible again](#) [LSM-4101]

Detailed info

Accessories

NEW

Filter functionality added to the Accessories screen [LSM-3762]

On the Accessories screen, accessories can be filtered based on the vehicle characteristics. It behaves similar to the Resources screen. A few filter criteria can be specified, and the results are filtered based on these criteria. But instead of a list of resources, the result contains the accessories. For instance, a search for `_make_ Audi` and `_model_ A4` will result in all accessories that are matched to Audi A4's.

The screenshot shows the 'Accessories' screen in the BetterBe application. At the top, there is a navigation bar with 'BetterBe' logo and various menu items like 'Netherlands', 'Free Search', 'Label', 'Layouts', 'Price calculation', 'Policies', 'Relation', 'Person', 'Search', 'Data Management', 'Quotations', 'Calculations', 'Admin'. Below the navigation bar, the 'Accessories' section is visible. It includes a 'Vehicle filters' section with two filter fields: 'ID' and 'Last modified'. An orange arrow points to the 'ID' filter field with the text 'By default, the accessories can be filtered on accessory id and modification date'. Below the filters, there is a table of accessories with columns for 'ID', 'Title', and 'OrderCode'. The table contains three rows: '500002 Towing hook TRK', '500003 Hazard triangle OV', and '500004 Filter FL'. The footer of the screenshot shows '© 1999-2020 BetterBe B.V.' and 'LeaseServices Management (v2.1.54)'.

Figure 1 Example of the default filtering for accessories

By default, the accessories can be filtered on the accessory id and modification date. Other filters can be added in the layout for the accessory list. Layout management can be found in the Admin menu. To create a layout for the Accessory screen, create a new Accessory list layout. Select the desired vehicle equipment and add those as filters.

Release notes 2.1.54

LeaseServices Management release 21082020

***Create accessory list layout**

Title

Layout name: Default

Layouts

Filter groups: Columns

Active filters:

- Last modified
- Version / Make
- Version / Model

Special filters:

- ID

Equipment filters are added with the schema search

These filters are active in this layout

The ID and Last modified filters are special filters. When they are not part of the layout, these will be found in this box.

Access & Accounts

NEW

Timeline added to the Account details screen [LSM-3969]

It is now possible to view the history of an account via the timeline at the top of the page. Historic accounts will be shown view-only.

Release notes 2.1.54

LeaseServices Management release 21082020

Policies

IMPROVED

Added colored checkboxes in the policy editor's "Add item" dialog [LSM-2655]

The checkboxes in the "Add item" dialog on the policy editor are now colored to reflect the type of entries they filter. This also serves as a key to the colored bars on the left of each entry.

Increased performance of policy editor [LSM-4017]

In environments where the set of available vehicles is severely restricted by a label policy the performance of the policy editor is increased.

Quotations & Persons & Relations

FIX

Linking from the Quotation screen to the Vehicle Details screen now shows the configured vehicle [LSM-3987]

Following the vehicle details link on the Calculation screen or the Quotation screen will now lead to the vehicle details of the historically configured vehicle instead of the plain, unconfigured vehicle.

Vehicle

FIX

Vehicle equipment history didn't always show [LSM-4049]

On the vehicle details screen, on various tabs there are [+] icons which, when clicked, show the history of the given equipment over time. In some cases, this did not work. This has been fixed.

Linking from the Search Screen to a Calculation Table now correctly filters the Calculation Table [LSM-4069]

Vehicle search results can be configured to show a link to calculation tables. Following the link automatically filters the calculation table by values obtained from the vehicle. However, if certain information was missing from the vehicle, it incorrectly filtered the calculation table.

Fixed generic error page upon validation error on calculation table screen [LSM-4172]

When invalid data was entered and submitted on the Calculation table edit screen a proper validation error is shown again.

Reports

FIX

Checkmarks on the report overview page are now centered [LSM-4134]

The checkmarks on the report detail overview page are now centered.

LeaseServices Management release 21082020

Resources

FIX

Creating a resource for a vehicle now also works with numeric equipment [LSM-3978]

On the vehicle details screen, the "Add resource" link goes to the "Create resource" screen and pre-fills the values for resource filters. This did not work for numeric equipment. This has been fixed.

Layouts

FIX

Fixed "Calculation parameter is not allowed" when saving a search layout [LSM-4169]

Sometimes saving a search layout would fail with the message "Calculation parameter is not allowed". This has been fixed. This happened when the layout contained a preset for a calculation parameter for another label, but the calculation parameter is not valid for the current label. This is a valid situation and validation should not fail in this situation.

Navigation & Context

FIX

Layout menu default indicator now visible again [LSM-4101]

The default indicator (★) in the layout menu disappeared when the default layout was not selected. This has been fixed.
